

iCinside

IContain Corporate Summary

IContain is a cutting-edge innovator, developer and marketer of resource management and asset protection solutions. IContain provides devices that utilize RFID, and cellular assisted /stand-alone GPS technologies that can be located in real-time anywhere. Combining the latest in all of these technologies, allows IContain devices to operate in locations where competitors cannot.

IContain's web-based software is the backbone that powers the hardware. It is a secure system that allows clients to access and manage our devices from anywhere in the world. Due to its web driven nature, no additional software installations are required-making it a flexible solution in any situation.

IInside[™] Product Description

IInside,[™] is an anti-theft, electronic interrupt device, developed to assist companies with the growing need to ensure prompt payment of electronic equipment for credit-challenged or otherwise under-banked consumers.

IInside[™] discourages asset theft and allows distributors to market their equipment with an iron-clad level of security that allows them to remotely enable or disable them with the press of a button.

IInside[™] provides a versatile solution for families seeking to limit the time children spend watching TV, playing video games, or using the computer.

The possibilities are endless.

ICinside™ Product Features

Remotely access to up to 20 electronic devices with a touch of a button. Confirm that the equipment has been located and turn it on or off based on your criteria.

- RF enabled for enhanced, penetrating reception

- Remotely enable or disable electronic equipment

- One remote can control up to 20 devices

- The secure codes that operate ICinside devices can be set and reconfigured by the user

- Can be installed internally or externally on any asset that requires electricity

- ICinside™ may be used in tandem with other IContain devices for additional functionality
